# Table of Contents

## Section 1: Lessons 1-10, Investigation 1

LESSON		PAGE
	1 Using Properties of Real Numbers	2
	2 Evaluating Expressions and Combining Like Terms	8
	3 Using Rules of Exponents	13
	<b>LAB 1</b> <b>Graphing Calculator:</b> Graphing a Function and Building a Table	19
	4 Identifying Functions and Using Function Notation	21
	<b>LAB 2</b> <b>Graphing Calculator:</b> Storing and Recalling Data in a Matrix	27
	5 Using Matrices to Organize Data and to Solve Problems	29
	6 Finding Percent of Change	36
	7 Solving Linear Equations <b>Exploration:</b> Solving Equations Using Algebra Tiles	42
	8 Finding Direct Variation	48
	9 Multiplying Matrices	54
	10 Solving and Graphing Inequalities	61
	<b>INV 1</b> <b>Investigation:</b> Logic and Truth Tables	69

### DISTRIBUTED STRANDS

 Number Sense and Foundations of Algebra	 Probability and Statistics
 Linear Functions	 Quadratic Functions
 Matrices	 Trigonometry
 Polynomials and Polynomial Functions	 Exponential and Logarithmic Functions
 Rational and Radical Functions	 Conic Sections
 Linear Systems	 Sequences, Series, and Logic

## Section 2: Lessons 11-20, Investigation 2

LESSON		PAGE
 11	Understanding Polynomials	72
 12	Solving Inverse Variation Problems	77
 LAB 3	<b>Graphing Calculator:</b> Calculating Points on a Graph	84
 13	Graphing Linear Equations I	86
 14	Finding Determinants	93
 15	Solving Systems of Equations by Graphing	100
 16	Using Cramer's Rule	107
 LAB 4	<b>Graphing Calculator:</b> Changing the Line and Window of a Graph	114
 17	Solving Equations and Inequalities with Absolute Value <b>Exploration:</b> Transforming $f(x) =  x $	116
 18	Calculating with Units of Measure	124
 19	Multiplying Polynomials	129
 20	Performing Operations with Functions	136
 INV 2	<b>Investigation:</b> Solving Parametric Equations	143

### Section 3: Lessons 21-30, Investigation 3

LESSON		PAGE
 21	Solving Systems of Equations Using the Substitution Method	146
 LAB 5	<b>Graphing Calculator:</b> Storing and Plotting a List of Data	153
 22	Analyzing Continuous, Discontinuous, and Discrete Functions	155
 23	Factoring Polynomials	163
 24	Solving Systems of Equations Using the Elimination Method	170
 LAB 6	<b>Graphing Calculator:</b> Calculating 1- and 2-Variable Statistical Data	178
 25	Finding Measures of Central Tendency and Dispersion	180
 26	Writing the Equation of a Line	187
 27	Connecting the Parabola with the Quadratic Function	194
 28	Simplifying Rational Expressions	201
 29	Solving Systems of Equations in Three Variables	207
 30	Applying Transformations to the Parabola and Determining the Minimum or Maximum	215
 INV 3	<b>Investigation:</b> Graphing Three Linear Equations in Three Variables	222

#### DISTRIBUTED STRANDS

 Number Sense and Foundations of Algebra	 Probability and Statistics
 Linear Functions	 Quadratic Functions
 Matrices	 Trigonometry
 Polynomials and Polynomial Functions	 Exponential and Logarithmic Functions
 Rational and Radical Functions	 Conic Sections
 Linear Systems	 Sequences, Series, and Logic

## Section 4: Lessons 31-40, Investigation 4

LESSON		PAGE
 31	Multiplying and Dividing Rational Expressions	226
 32	Solving Linear Systems with Matrix Inverses <b>Exploration:</b> Exploring Matrix Inverses	233
 33	Applying Counting Principles	240
 34	Graphing Linear Equations II	246
 35	Solving Quadratic Equations I	253
 36	Using Parallel and Perpendicular Lines	259
 37	Adding and Subtracting Rational Expressions	266
 38	Dividing Polynomials Using Long Division	273
 39	Graphing Linear Inequalities in Two Variables	279
 40	Simplifying Radical Expressions	286
 INV 4	<b>Investigation:</b> Understanding Cryptography	293

## Section 5: Lessons 41-50, Investigation 5

LESSON		PAGE
 41	Using the Pythagorean Theorem and the Distance Formula <b>Exploration:</b> Visualizing the Pythagorean Theorem	296
 LAB 7	<b>Graphing Calculator:</b> Calculating Permutations and Combinations	303
 42	Finding Permutations and Combinations <b>Exploration:</b> Pascal's Triangle and Combinations	304
 43	Solving Systems of Linear Inequalities	312
 44	Rationalizing Denominators	318
 LAB 8	<b>Graphing Calculator:</b> Applying Linear and Median Regression	323
 45	Finding the Line of Best Fit <b>Exploration:</b> Collecting and Analyzing Data	325
 46	Finding Trigonometric Functions and their Reciprocals	331
 47	Graphing Exponential Functions	337
 48	Understanding Complex Fractions	343
 49	Using the Binomial Theorem	348
 50	Finding Inverses of Relations and Functions <b>Exploration:</b> Graphing a Function and its Inverse	355
 INV 5	<b>Investigation:</b> Finding the Binomial Distribution	361

### DISTRIBUTED STRANDS

 Number Sense and Foundations of Algebra	 Probability and Statistics
 Linear Functions	 Quadratic Functions
 Matrices	 Trigonometry
 Polynomials and Polynomial Functions	 Exponential and Logarithmic Functions
 Rational and Radical Functions	 Conic Sections
 Linear Systems	 Sequences, Series, and Logic

## Section 6: Lessons 51-60, Investigation 6

LESSON		PAGE
 51	Using Synthetic Division	364
 LAB 9	<b>Graphing Calculator:</b> Using the Trigonometry Keys and Adjusting to a Trigonometric Window	370
 52	Using Two Special Right Triangles	372
 53	Performing Compositions of Functions	378
 54	Using Linear Programming	384
 55	Finding Probability	391
 56	Finding Angles of Rotation	399
 57	Finding Exponential Growth and Decay	406
 58	Completing the Square <b>Exploration:</b> Modeling Completing the Square	413
 59	Using Fractional Exponents	420
 60	Distinguishing Between Mutually Exclusive and Independent Events	427
 INV 6	<b>Investigation:</b> Deriving the Quadratic Formula	433

## Section 7: Lessons 61-70, Investigation 7

LESSON		PAGE
 61	Understanding Advanced Factoring	436
 62	Using Complex Numbers	442
 63	Understanding the Unit Circle and Radian Measures <i>Exploration: Exploring the Unit Circle</i>	447
 LAB 10	<i>Graphing Calculator: Using the Log Keys</i>	455
 64	Using Logarithms	457
 65	Using the Quadratic Formula	462
 66	Solving Polynomial Equations	469
 67	Finding Inverse Trigonometric Functions	476
 68	Finding Conditional Probability	483
 69	Simplifying Complex Expressions	489
 70	Solving Radical Equations	495
 INV 7	<i>Investigation: Collecting Data</i>	502

## Using Properties of Real Numbers

## Warm Up

Start off each lesson by practicing prerequisite skills and math vocabulary that will make you more successful with today's new concept.

- Vocabulary** A number whose value is less than 0 is called a \_\_\_\_\_ number.  
(SB)
- Add  $12 + (-12)$ .  
(SB)
- Multiply  $\frac{2}{3} \cdot \frac{3}{2}$ .  
(SB)
- Subtract  $10 - 9.85$ .  
(SB)

## New Concepts

A set is a collection of objects. If all of the objects in one set are also members of a second set, then the first set is a subset of the second. The real numbers are a set of numbers consisting of several subsets of numbers. The **real numbers** consist of the **rational numbers** and the **irrational numbers**. The rational numbers include the natural numbers  $\{1, 2, 3, \dots\}$ , the **whole numbers**  $\{0, 1, 2, 3, \dots\}$ , and the **integers**  $\{\dots, -3, -2, -1, 0, 1, 2, 3, \dots\}$ .

Rational numbers can be written as quotients of integers. Rational numbers can also be written as decimals that terminate or repeat. Irrational numbers cannot be written in any of these ways. Pi and many roots of real numbers are common examples of irrational numbers.

## Caution

The negative integers are not considered whole numbers even though they do not contain fractions.

## Example 1 Classifying Real Numbers

Identify the subsets of real numbers of which each number is a member.

a.  $-5$

**SOLUTION**  $-5$  is a real number, a rational number, and an integer.

b.  $25$

**SOLUTION**  $25$  is a real number, a rational number, an integer, a whole number, and a natural number.

c.  $-\sqrt{5}$

**SOLUTION**  $-\sqrt{5}$  is a real number and an irrational number.

There are a number of properties that can be used when adding and multiplying real numbers.

Properties of Addition and Multiplication		
Let $a$ , $b$ , and $c$ be real numbers.		
Property	Addition	Multiplication
Closure	$a + b$ is a real number	$ab$ is a real number
Commutative	$a + b = b + a$	$ab = ba$
Associative	$(a + b) + c = a + (b + c)$	$(ab)c = a(bc)$
The following property involves both addition and multiplication.		
Distributive	$a(b + c) = ab + ac$	

Each day brings you a **New Concept** where a new topic is introduced and explained through thorough **Examples** — using a variety of methods and real-world applications.

You will be reviewing and building on this concept throughout the year to gain a solid understanding and ensure mastery on the test.

### Example 2 Identifying Properties of Real Numbers

Identify which property of real numbers is being demonstrated.

a.  $3 \cdot 8 = 8 \cdot 3 = 24$

**SOLUTION** Commutative Property of Multiplication

b.  $5(7 + 11) = 5 \cdot 7 + 5 \cdot 11 = 35 + 55 = 90$

**SOLUTION** Distributive Property

c.  $(12 + 20) + 30 = 12 + (20 + 30) = 12 + 50 = 62$

**SOLUTION** Associative Property of Addition

### Example 3 Using the Properties of Real Numbers

Simplify each expression. Identify which property you used for each step.

a.  $12 + 4 + 18 + 56$

**SOLUTION**

$$12 + 4 + 18 + 56$$

$$= 12 + 18 + 4 + 56 \quad \text{Commutative Property of Addition}$$

$$= (12 + 18) + (4 + 56) \quad \text{Associative Property of Addition}$$

$$= 30 + 60 \quad \text{Add.}$$

$$= 90 \quad \text{Add.}$$

b.  $5(23)$

**SOLUTION**

$$5(23)$$

$$= 5(20 + 3)$$

$$= (5 \cdot 20) + (5 \cdot 3) \quad \text{Distributive Property}$$

$$= 100 + 15 \quad \text{Multiply.}$$

$$= 115 \quad \text{Add.}$$

#### Hint

The Distributive Property makes multiplying easier by breaking down a number into numbers where mental math can be used.

### More Properties of Addition and Multiplication

Property	Addition	Multiplication
Identity	$a + 0 = a, 0 + a = a$	$a \cdot 1 = a, 1 \cdot a = a$
Inverse	$a + (-a) = 0$	$a \cdot \frac{1}{a} = 1, a \neq 0$

#### Math Language

The **additive inverse** of a number is sometimes called the opposite of the number.

In some lessons, **Explorations** allow you to go into more depth with the mathematics by investigating math concepts with manipulatives, through patterns, and in a variety of other ways.

The **Lesson Practice** lets you check to see if you understand today's new concept.

The italic numbers refer to the Example in this lesson in which the major concept of that particular problem is introduced. You can refer to lesson examples if you need additional help.

#### Example 4 Finding Inverses of Real Numbers

- a. Find the additive inverse of  $-7a$ .

**SOLUTION** The additive inverse of  $-7a$  is  $7a$  since  $-7a + 7a = 0$ .

- b. Find the multiplicative inverse of  $\frac{5n}{12p}$ .

**SOLUTION** The multiplicative inverse is the reciprocal of  $\frac{5n}{12p}$  which is  $\frac{12p}{5n}$ .

$$\frac{5n}{12p} \cdot \frac{12p}{5n} = 1$$

#### Example 5 Application: Finance

DVDs are on sale at Tech World for \$11.95 each including tax. Use the Distributive Property to mentally calculate the total cost of buying 5 DVDs.

**SOLUTION** Think of \$11.95 as \$12.00 - \$0.05.

Write an expression for the cost of 5 DVDs.

$$\begin{aligned} &5(12 - 0.05) \\ &= 5(12) - 5(0.05) && \text{Use the Distributive Property.} \\ &= 60 - 0.25 && \text{Multiply.} \\ &= 59.75 && \text{Subtract.} \end{aligned}$$

The total cost of 5 DVDs is \$59.75.

#### Lesson Practice

- a. Identify the subsets of real numbers of which  $\sqrt{3}$  is a member. (Ex 1)  
 b. Identify the subsets of real numbers of which  $-\frac{2}{3}$  is a member. (Ex 1)  
 c. Identify the subsets of real numbers of which 1 is a member. (Ex 1)  
 d. Identify which property of real numbers is being demonstrated. (Ex 2)

$$-2(5 + 9) = -2 \cdot 5 + (-2) \cdot 9 = -10 - 18 = -28$$

- e. Identify which property of real numbers is being demonstrated. (Ex 2)

$$(12 \cdot 6) \cdot 2 = 12 \cdot (6 \cdot 2) = 12 \cdot 12 = 144$$

- f. Identify which property of real numbers is being demonstrated. (Ex 2)

$$3 + 21 = 21 + 3 = 24$$

- g. Simplify the expression  $(43 + 21) + 9$ . Identify which property you used (Ex 3) for each step.

**h.** Simplify the expression  $(4 \cdot 16) \cdot 4$ . Identify which property you used for each step.

**i.** Find the additive inverse of  $\frac{3q}{2}$ .

**j.** Find the multiplicative inverse of  $-4$ .

**k.** Lucinda drove four hours from her house to a family reunion. Her average speed was 55 mph. Use the Distributive Property to mentally calculate the distance between Lucinda's house and the reunion.

## Practice Distributed and Integrated

Simplify each expression.

1.  $-3 - 6 + 1$   
(SB)

2.  $-4 + 6 - 8 =$   
(SB)

Simplify each expression using the properties of real numbers.

\*3.  $-2[(5 - 7 - 2) - (-2 - 7) - 2]$   
(1)

\*4.  $4[3 - (-2)] + 5(-2 + 1)$   
(1)

Simplify each expression.

5.  $14.6 - 9.03$   
(SB)

6.  $39.75 + 49.2$   
(SB)

Order the given numbers from least to greatest.

7. 2.1, 2.3, 2.09  
(SB)

8.  $\frac{3}{5}, \frac{4}{7}, \frac{1}{2}$   
(SB)

Find the distance traveled given the rate and time below.

9. rate = 40 miles per hour, time =  $3\frac{1}{2}$  hours  
(SB)

10. rate = 55 miles per hour, time = 0.5 hours  
(SB)

\*11. **Write** Explain the steps you would use to simplify  $-2(28 - 19) + 6$ . Then find the value.  
(1)

\*12. **Justify** Simplify  $2 \cdot 3 \cdot 6$ . Justify your answer by identifying which property you used for each step.  
(1)

13. **Geography** The following graph represents the elevations of mountains located in the United States.  
(SB)

Which mountain has the lowest elevation?

The **italic numbers** refer to the lesson(s) in which the major concept of that particular problem is introduced. You can refer to the examples or practice in that lesson, if you need additional help.

14. **Sports** A football field is 120 yards long and 160 feet wide. What is the area in square yards?

\*15. **Verify** Simplify the expression  $(6 \cdot 5) \cdot 2$  using only one property of real numbers. Identify the property that you used. Verify your result using two properties of real numbers.

\*16. **Multiple Choice** Identify the subset of real numbers of which 7 is not a member.  
A irrational number                      B integer  
C whole number                            D real number

17. **Multi-Step** Suzy can read 12 pages in four minutes. Jonas can read 9 pages in three minutes.

- Find the number of pages Suzy and Jonas can read per minute.
- Compare the rates.

\*18. **Multiple Choice** Identify which property or properties of real numbers are being demonstrated.

$$27 \cdot 3 = (20 \cdot 3) + (7 \cdot 3) = 60 + 21 = 81$$

- A Commutative Property of Addition  
B Associative Property of Addition  
C Both A and B  
D Distributive Property

19. **Sports** The specified circumference of an official professional baseball is from 9 to 9.25 inches.

- Find the approximate radius of the smallest official baseball.
- Find the approximate surface area of the smallest official baseball.

\*20. **Statistics** The table below shows the number of homeruns hit by a softball player over a three-year period. Use properties of real numbers to mentally calculate the average annual homeruns that she hit during this period.

	Year 1	Year 2	Year 3
Homeruns	6	13	14

\*21. **Interest Rates** The average credit card annual interest rate is around 19%. Use the Distributive Property to mentally calculate the amount of interest paid annually on a \$500 balance.

22. **Biology** Some large species of bamboo plants can grow at a rate of 1 meter per day.

- If a 2-meter tall bamboo plant grows at this rate, how tall will it be after 2 weeks?
- How long will it take for the bamboo plant to reach a height of 50 meters?

In the **Practice**, you will review today's new concept as well as math you learned in earlier lessons. By practicing problems from many lessons every day, you will begin to see how math concepts relate and connect to each other and to the real world.

Also, because you practice the same topic in a variety of ways over several lessons, you will have "time to learn" the concept and will have opportunities to show that you understand.

The mixed set of Practice is just like the mixed format of your state test. You'll be practicing for the "big" test every day!

- \*23. Geometry** The base of a triangle equals  $\frac{1}{m}$  and the height equals  $m$ . The area of the triangle can be calculated as shown below. Which properties of real numbers are demonstrated?

$$A = \frac{1}{2}(bh) = \frac{1}{2}\left(\frac{1}{m} \cdot m\right) = \frac{1}{2} \cdot 1 = \frac{1}{2}$$

- 24. Carlos** measures an angle  $x$ . He then finds that the complement of the angle is  $35^\circ$ .
- What is the measure of angle  $x$ ?
  - What is the supplement of angle  $x$ ?

- \*25. Error Analysis** Explain the error in the statement that follows and correct the statement. “ $-7$  is a real number, a rational number, and a whole number.”

- 26. Estimate** The chart below shows the total amount of hybrid vehicles sold by a manufacturer over a 4-year time span. Round to the nearest ten-thousand to estimate:
- the total number of hybrid vehicles sold from 2003 to 2006.
  - the sales increase from 2003 to 2006.

Year	2003	2004	2005	2006
Cars Sold	47,525	83,153	209,711	246,642

- \*27. Graphing Calculator** Use the Distributive Property to mentally calculate  $12(18)$ . Check using a graphing calculator.

- 28. Error Analysis** Two students calculated the total cost for 3 CDs. Each CD cost \$14.95. Which student has the correct answer? Explain the other student's error.

	Student A	Student B
	$3(15 - 0.05)$	$3(15 - 0.05)$
	$3(15) - (0.05)$	$3(15) - 3(0.05)$
	$45 - 0.05$	$45 - 0.15$
	44.95	44.85

- 29. A cube** has a side length of 5 centimeters.

- Find the surface area of the cube.
- Find the volume of the cube.

- 30. Analyze** John asked 100 people to choose their favorite pet.

Use the chart to determine how many people chose dogs as their favorite pet.

The starred problems usually cover challenging or recently presented content. Because of that, it is suggested that these exercises be worked first, in case you might want help.

## Evaluating Expressions and Combining Like Terms

## Warm Up

- Vocabulary** In the term  $3xy$ , 3 is the \_\_\_\_\_.
- True or False:  $23 + 2(4) = 5(6) + 7$ .
- Simplify:  $8 + 12 \div 4 - 5$ .

## New Concepts

An **algebraic expression** can contain letters that represent unspecified numbers. These letters are called **variables**. The value of the algebraic expression  $x + 4$  depends on the number you use as a replacement for  $x$ . If you replace  $x$  with  $-32$ , the expression will have a value of  $-28$ .

$$x + 4$$

$$(-32) + 4 = -28$$

When you replace the variables in an expression with selected numbers and simplify using the order of operations, you have **evaluated** the expression.

## Order of Operations

1. Parentheses and grouping symbols
2. Exponents
3. Multiply and divide from left to right
4. Add and subtract from left to right

## Hint

Subtracting a number is the same as adding its opposite.

## Example 1 Evaluating Expressions with Exponents

Evaluate each expression if  $x = -2$  and  $y = -4$ .

a.  $x^2y - y$

## SOLUTION

$$\begin{aligned} x^2y - y &= (-2)^2(-4) - (-4) \\ &= (+4)(-4) - (-4) \\ &= -16 - (-4) \\ &= -16 + 4 = -12 \end{aligned}$$

Replace  $x$  with  $-2$  and  $y$  with  $-4$ .  
Perform operations with exponents.  
Multiply.  
Subtract.

b.  $2xy + 3y^2$

## SOLUTION

$$\begin{aligned} 2xy + 3y^2 &= 2(-2)(-4) + 3(-4)^2 \\ &= 2(-2)(-4) + 3(16) \\ &= 16 + 48 = 64 \end{aligned}$$

Replace  $x$  with  $-2$  and  $y$  with  $-4$ .  
Perform operations with exponents.  
Multiply and add.

Online Connection

www.SaxonMathResources.com

**Example 2** Evaluating Expressions with ParenthesesEvaluate each expression if  $a = -2$  and  $b = 4$ .

**a.**  $a(-b - a) - ab$

**SOLUTION**

$$a(-b - a) - ab$$

$$= -2[-(4) - (-2)] - (-2)(4)$$

Replace  $a$  with  $-2$  and  $b$  with  $4$ .

$$= -2(-2) - (-2)(4)$$

Perform operations inside parentheses.

$$= 4 - (-8)$$

Multiply.

$$= 4 + 8$$

Subtract.

$$= 12$$

**b.**  $ab - a + \frac{a + b}{2}$

**SOLUTION**

$$ab - a + \frac{a + b}{2}$$

$$= (-2)(4) - (-2) + \frac{(-2) + 4}{2}$$

Replace  $a$  with  $-2$  and  $b$  with  $4$ .

$$= (-2)(4) - (-2) + \frac{2}{2}$$

Perform operations inside parentheses.

$$= (-8) - (-2) + 1$$

Divide.

$$= -8 + 2 + 1$$

Add and subtract.

$$= -5$$

**Caution**

When using your calculator to square negative numbers you need to use parentheses.  $(-3)^2 = 9$ , but  $-3^2 = -9$ .

**Example 3** Using a Calculator to Evaluate ExpressionsUse a calculator to evaluate  $3mp + 2p^2$  if  $m = 6$  and  $p = -3$ .**SOLUTION** Replace  $m$  with  $6$  and  $p$  with  $-3$ .

$$3(6)(-3) + 2(-3)^2$$

Enter this expression into the calculator as shown.

3(6)(-3)+2(-3)^2

Press **ENTER** to find the answer is  $-36$ .

The **terms of an algebraic expression** are separated by addition and subtraction symbols. **Like terms** have the same variable raised to the same power. **Constant terms** are like terms that always have the same value.

Add like terms by adding the coefficients of the terms, as shown in the following examples.

#### Example 4 Simplifying Expressions

Simplify the expression by adding like terms.

$$3xy - 2x + 4 - 6yx + 3x$$

**SOLUTION** Rearrange the expression so that the like terms are next to each other. Then add like terms.

$$\begin{aligned} &3xy - 2x + 4 - 6yx + 3x \\ &= 3xy - 6yx - 2x + 3x + 4 \\ &= -3xy + x + 4 \end{aligned}$$

#### Hint

The order of the variables that a term is composed of doesn't change its value ( $xyz$  equals  $zyx$ ).

#### Example 5 Application: Metalworking

A metal worker is using the four sheets of metal shown below with their dimensions. What is the total area of the four sheets?

#### SOLUTION

First find the individual areas.

$$\begin{aligned} 4 \cdot x &= 4x \text{ square units} \\ 3 \cdot 2x &= 6x \text{ square units} \\ 4 \cdot \frac{1}{2}x &= 2x \text{ square units} \\ 3 \cdot 5x &= 15x \text{ square units} \end{aligned}$$

Now add to find the total area.

$$4x + 6x + 2x + 15x = 27x \text{ square units}$$

- \*14. **Budgets** Van budgets \$12 a day for groceries for weekdays and \$15 a day for weekends. Write an expression in simplest form to show his grocery budget for  $w$  weeks.
- \*15. **Multi-Step** For the expression  $2qr(3 + r)$
- evaluate if  $q = 2$  and  $r = -1$ .
  - explain how the result would be affected if  $q$  was doubled.
  - show this is true by evaluating the expression if  $q = 4$  and  $r = -1$ .
- \*16. **Sports** A football is kicked from ground level. The height  $h$  in feet of the ball after  $t$  seconds can be modeled by the expression  $-16t^2 + 48t$ . Find the height of the ball after 2 seconds.

**Measurement** Find the measure of the complementary angle given the measures of the angles below.

17.  $35^\circ$   
(SB)

18.  $68^\circ$   
(SB)

19.  $5^\circ$   
(SB)

20.  $89^\circ$   
(SB)

- \*21. **Multiple Choice** Evaluate  $4x^2 + 7y$  if  $x = 3$  and  $y = -2$ .
- A 10                      B 41                      C 50                      D 22
- \*22. **Error Analysis** Two students multiplied  $-13 \cdot 18$  using the Distributive Property. Which student is correct? Find and explain the other student's error.

Student A	Student B
$  \begin{aligned}  -13 \cdot 18 &= -13(20 - 2) \\  &= -13(20) + 13(2) \\  &= -260 + 26 \\  &= -234  \end{aligned}  $	$  \begin{aligned}  -13 \cdot 18 &= -13(20 - 2) \\  &= -13(20) - 13(2) \\  &= -260 - 26 \\  &= -286  \end{aligned}  $

- \*23. **Geometry** A rectangle has length  $c$  and width  $2d$ . Another rectangle has length 4 and width  $(5 - c)$ . Write a simplified expression of their combined area.
- \*24. **Verify** Is  $a^2 + b^2 = (a + b)^2$ ? Support your answer with an example.
- \*25. **Consumer** A local sandwich shop has \$6 lunches, and you receive a \$5 discount on the tenth lunch. Calculate your total cost for ten lunches at this shop.
- \*26. **Write** Does zero have a multiplicative inverse? Explain your answer.
- \*27. **Graphing Calculator** Use a calculator to evaluate the expression  $fg^2 - (2f - g^2)$  if  $f = 1$  and  $g = -2$ . Then, verify the answer by simplifying and solving.

Simplify by combining like terms.

- \*28.  $5ab + 7a - 3ab + 4b$     \*29.  $y - 9x^2y + 4 + 3x^2y + 12$     \*30.  $2(x + 3) - x$

## Using Rules of Exponents

## Warm Up

- Vocabulary** In the expression  $3^2$ , 2 is the \_\_\_\_\_.  
(SB)
- True or False:  $5^4 = 5 + 5 + 5 + 5$ .  
(SB)
- Evaluate  $n \cdot n \cdot n \cdot n$  for  $n = -3$ .  
(SB)

## New Concepts

In an expression such as  $x^n$  the **exponent** tells the number of times that the base is a factor. So  $2^3$  is defined as 2 times 2 times 2. Two to the negative third power is defined as 1 over 2 to the third power.

$$2^{-3} = \frac{1}{2^3}$$

The formal definition of **negative exponents** is as follows:

Definition of  $x^{-n}$ 

If  $n$  is any real number and  $x$  is any real number that is not zero,

$$x^{-n} = \frac{1}{x^n}$$

This definition says that when an exponential expression is written in reciprocal form, the sign of the exponent must be changed. If the exponent is negative, it is positive in reciprocal form; and if it is positive, it is negative in reciprocal form.

## Reading Math

In the expression  $5^4$ , 5 is the base and 4 is the exponent. The expression is read "5 raised to the 4th power."

## Example 1 Simplifying Negative Exponents

Simplify.

a.  $\frac{1}{3^{-2}}$

**SOLUTION**

a.  $\frac{1}{3^{-2}} = 3^2 = 9$

b.  $3^{-3}$

b.  $3^{-3} = \frac{1}{3^3} = \frac{1}{27}$

c.  $-3^{-2}$

**SOLUTION**

c.  $-3^{-2} = -\frac{1}{3^2} = -\frac{1}{9}$

d.  $(-3)^{-2}$

d.  $(-3)^{-2} = \frac{1}{(-3)^2} = \frac{1}{9}$

e.  $-(-3)^{-3}$

**SOLUTION**

e.  $-(-3)^{-3} = -\frac{1}{(-3)^3} = -\frac{1}{-27} = -\left(-\frac{1}{27}\right) = \frac{1}{27}$

Online Connection

www.SaxonMathResources.com

### Math Reasoning

**Connect** Apply the definition of negative exponents to explain why the product theorem states that  $x \neq 0$ .

### Math Reasoning

**Analyze** In Example 2 the definition of  $x^{-n}$  is used to simplify each expression. What mathematical operation would have the same result? Explain.

Two rules for exponents are the product rule and the power rule. These rules simplify operations with bases.

The product of powers whose bases are the same can be found by writing each power as repeated multiplication.  $x^2 \cdot x^3$  means  $x \cdot x$  times  $x \cdot x \cdot x$  which equals  $x^5$ . The exponents may be added to obtain the same result:  $x^2 \cdot x^3 = x^{2+3} = x^5$ . This demonstrates the product rule for exponents.

#### Product Rule for Exponents

If  $m$ ,  $n$ , and  $x$  are real numbers and  $x \neq 0$ ,

$$x^m \cdot x^n = x^{m+n}.$$

### Example 2 Simplifying Expressions Using the Product Rule

Simplify.

a.  $x^2yx^{-5}y^{-4}x^5x$

#### SOLUTION

Simplify by adding the exponents of like bases.

$$\begin{aligned}x^2yx^{-5}y^{-4}x^5x &= x^2x^{-5}x^5xy^{-4} \\ &= x^{2+(-5)+5+1}y^{1+(-4)} \\ &= x^3y^{-3}\end{aligned}$$

$x^3y^{-3}$  may also be written with positive exponents as  $\frac{x^3}{y^3}$ .

b.  $\frac{yy^{-3}x^4y^5x^{-10}}{y^{-6}x^{-3}y^{10}x^2}$

#### SOLUTION

**Step 1:** Simplify the numerator and denominator by adding the exponents of like bases.

**Step 2:** Apply the definition of  $x^{-n}$ .

**Step 3:** Repeat step 1.

$$\frac{yy^{-3}x^4y^5x^{-10}}{y^{-6}x^{-3}y^{10}x^2} = \frac{x^{4+(-10)}y^{1+(-3)+5}}{x^{(-3)+2}y^{(-6)+10}} = \frac{x^{-6}y^3}{x^{-1}y^4} = x^{-6} \cdot x^1 \cdot y^3 \cdot y^{-4} = x^{-5}y^{-1} \text{ or } \frac{1}{x^5y}$$

The product rule can be used to expand  $(x^2)^3$  as

$$(x^2)^3 = x^2x^2x^2 = x^{2+2+2} = x^6$$

This demonstrates the power rule for exponents.

#### Power Rule for Exponents

If  $m$ ,  $n$ , and  $x$  are real numbers,

$$(x^m)^n = x^{m \cdot n}.$$

This rule extends to any number of exponential factors, so that

$$(x^a y^b z^c \dots)^n = x^{an} y^{bn} z^{cn} \dots$$

**Example 3** Simplifying Using the Power Rule of Exponents

Simplify.

$$\text{a. } \frac{x(x^{-3})^2y(xy^{-2})^{-3}}{(x^2)^3y^{-3}(x^2)^3}$$

**SOLUTION**

Use the power rule in both the numerator and denominator, then simplify the expressions using the product rule.

$$\frac{x(x^{-3})^2y(xy^{-2})^{-3}}{(x^2)^3y^{-3}(x^2)^3} = \frac{xx^{-6}yx^{-3}y^6}{x^6y^{-3}x^6} = \frac{x^{-8}y^7}{x^{12}y^{-3}} = x^{-20}y^{10} = \frac{y^{10}}{x^{20}}$$

$$\text{b. } \frac{(x^a)^b(y^a)^{b+2}}{x^{-a}}$$

**SOLUTION**

$$\frac{(x^a)^b(y^a)^{b+2}}{x^{-a}} = \frac{x^{ab}y^{a(b+2)}}{x^{-a}} = x^{ab}x^ay^{a(b+2)} = x^{ab+a}y^{a(b+2)}$$

**Scientific notation** is a method of writing a number as the product of a number greater than or equal to 1 but less than 10 and a power of 10. Multiplying a number by a positive integral power of 10 moves the decimal point to the right. Multiplying a number by a negative integral power of 10 moves the decimal point to the left.

Number	The decimal moves	Scientific Notation
412.36	Two places left	$4.1236 \times 10^2$
0.041236	Two places right	$4.1236 \times 10^{-2}$

Writing very large or small numbers in scientific notation can be helpful. Rules of exponents can be used to simplify expressions written in scientific notation.

**Hint**

The Commutative and Associative Properties of Multiplication allow you to move the numbers and to group them to make calculations easier.

**Example 4** Simplifying Expressions in Scientific Notation

$$\text{Simplify } \frac{(0.0003 \times 10^{-6})(4000)}{(0.006 \times 10^{15})(2000 \times 10^4)}$$

**SOLUTION**

Begin by writing all four numbers in scientific notation. Then multiply and divide.

$$\begin{aligned} \frac{(3 \times 10^{-4} \times 10^{-6})(4 \times 10^3)}{(6 \times 10^{-3} \times 10^{15})(2.0 \times 10^3 \times 10^4)} &= \frac{(3 \times 10^{-10})(4 \times 10^3)}{(6 \times 10^{12})(2 \times 10^7)} \\ &= \frac{3 \cdot 4}{6 \cdot 2} \times \frac{10^{-7}}{10^{19}} = 1 \times 10^{-7+(-19)} = 1 \times 10^{-26} \end{aligned}$$

**Example 5 Astronomy**

The speed of light is  $3 \times 10^8$  meters/second. If the moon is  $3.844 \times 10^8$  meters from the earth, how many seconds does it take light to reach the moon from the earth? Give the answer to the nearest hundredth.

**SOLUTION** Divide the moon's distance from the earth by the speed of light.

$$\frac{3.844 \times 10^8}{3 \times 10^8} = \frac{3.844}{3} \times \frac{10^8}{10^8} = \frac{3.844}{3} \approx 1.28 \text{ seconds}$$

It takes light about 1.28 seconds to reach the moon from the earth.

**Lesson Practice**

**Simplify.**

(Ex 1)

a.  $\frac{1}{2^{-3}}$

b.  $2^{-4}$

c.  $-2^{-2}$

d.  $(-2)^{-3}$

e.  $-(-2)^{-4}$

(Ex 1)

$\frac{xx^6y^8x^{-11}y^{-3}}$

f.  $x^9y^{-1}x^{-2}y^3y^{-7}$

(Ex 2)

$\frac{(y^2)^{-3}x^4(xy^{-2})^{-2}}$

(Ex 2)

g.  $\frac{x^{-5}y^2x^{-4}}$

(Ex 3)

h.  $\frac{xy^4}{xy^4}$

(Ex 3)

i.  $\frac{(x^b)^{a-1}(xy^{-a})^{-b}}{y^{-1}}$

(Ex 3)

j.  $\frac{(0.004)(600 \times 10^9)}{(30000 \times 10^{-12})(0.0001 \times 10^3)}$

(Ex 4)

k. The United States population is approximately  $2.99 \times 10^8$ . In one year, the United States produced  $4.78 \times 10^{11}$  pounds of garbage. Approximately how much garbage did the average American produce that year?

(Ex 5)

**Practice Distributed and Integrated**

Evaluate each expression for the given values of  $a$  and  $b$ .

1.  $-b^2 - b(a - b^2)$  if  $a = 4$  and  $b = -3$

(2)

2.  $a^2 - b^3(a - b)$  if  $a = -2$  and  $b = -3$

(2)

State the properties illustrated below.

3.  $a + b + c = b + a + c$

(1)

4.  $a(b + c) = ab + ac$

(1)

Use the rules of exponents to simplify the expressions below.

\*5.  $\frac{(2x^2)^{-3}(xy^0)^{-2}}{2xx^0x^1xxy^2}$

(3)

\*6.  $\frac{a^0bc^0(a^{-1}b^{-1})^2}{ab(ab^0)abc}$

(3)

\*7.  $\frac{(2x^2y^3)^{-3}y}{(4xy)^{-2}(x^{-2}y)^3y}$

(3)

\*8.  $\frac{xx^{-2}y(x^{-3})^2xy^0}{(2xy)^{-2}x^2(y^{-3})^2}$

(3)

9. What is the area of a circle with radius 3 meters? Give your answer in terms of  $\pi$ .

(SB)

10. Angles  $a$  and  $b$  are vertical angles. If angle  $b$  measures  $74^\circ$ , what is the measure of angle  $a$ ?

(SB)

-  \*11. **Write** In 2002, the average height of a 10-year old girl was  $1.4 \times 10^{-3}$  km. Approximately  $3 \times 10^7$  10-year old girls lying head-to-toe would equal the circumference of the earth at the equator. Explain how you could use properties of real numbers to mentally estimate the circumference.

12. **Consumer** Your dinner total at your favorite restaurant is \$18.

- (1) a. Use the Distributive Property to mentally calculate 10% of your dinner bill.  
b. Explain how the result in part a would be helpful to mentally calculate a 15% tip.

13. **Error Analysis** A student is asked to simplify an expression and identify which property was used for each step. His answer is shown below. Identify and explain the error(s).

$$(8 + 4) \cdot 9$$

$$(8 \cdot 9) + (4 \cdot 9) \quad \text{Associative Property of Addition}$$

$$72 + 36 \quad \text{Distributive Property}$$

$$108 \quad \text{Add.}$$

14. a. Evaluate the expression  $1 - (3x^2 - 2y)$  if  $x = 2$  and  $y = 3$ .

(2)

- b. Explain how the result would be affected if  $y$  was doubled.

- c. Show that this is true by evaluating the expression if  $x = 2$  and  $y = 6$ .

15. **Nutrition** The U.S. recommended daily amount of calcium for most adults is

(2)

1000 mg per day. Milana's breakfast consists of cereal that contains 33 mg calcium in  $\frac{1}{4}$ -cup and milk that contains 75 mg calcium per  $\frac{1}{4}$ -cup. Calculate the total amount of calcium in milligrams in Milana's breakfast of  $\frac{3}{4}$ -cup cereal with  $\frac{1}{2}$ -cup milk.

16. **Justify** A square drawn on a coordinate grid has adjacent vertices at points

(2)

$(u, 1)$  and  $(5u, 1)$ . Another square has adjacent vertices at points  $(2u, 1)$  and  $(4u, 1)$ . Write a simplified expression of their combined area. Explain how you obtained your answer.

-  17. **Coordinate Geometry** A figure on a coordinate graph is translated 2 units to the right and 5 units up. Its new coordinates can be written with the expressions  $(x + 2, y + 5)$ . A point is translated to  $(19, 19)$ , what are the coordinates of the original point?

18. **Verify** Evaluate the expression  $3g - 2f + fg^2 - 5g + 4fg^2 + 6f$  if  $f = 1$  and  $g = -1$

(2)

by inserting the variable values into the expression as written. Verify your answer by simplifying the expression first, then inserting the variable values.

- \*19. **Multiple Choice** Simplify  $\frac{y^{-3}xy^2x^{-4}x^5}{x^3y^{-1}}$ .

(3)

A  $\frac{1}{x}$

B  $\frac{1}{x^2y^5}$

C  $\frac{x^5}{y^2}$

D  $\frac{x^3}{y}$

 **20. Write** Why is  $1^{1000000} = 1$ ?  
(SB)

**\*21. Error Analysis** Two students incorrectly simplified the expression  $\frac{2^3(2^{-3})^3}{2(2^2 + 2)}$ . Their steps are shown below. Explain the error of each student.

Student A	Student B
$\frac{2^3(2^{-2})^3}{2(2^2 + 2)} = \frac{2^3(2^{-6})}{2(4 + 2)}$ $= \frac{2^{-3}}{12} = \frac{1}{12(-2)^3} = -\frac{1}{96}$	$\frac{2^3(2^{-2})^3}{2(2^2 + 2)} = \frac{2^3(2^{-6})}{2(2^2)} = \frac{2^3}{2^4} = \frac{1}{2^1} = \frac{1}{2}$

**22. Volcanos** Vailulu'u is an underwater volcano in the Pacific Ocean. The volcano has a height of about 4,200 m off the sea floor. If the top of the volcano is at a depth of 590 m below sea level, what is the depth of the sea floor in this area?  
(SB)

**\*23. Verify** The Atlantic Ocean is  $3.93 \times 10^3$  m deep and has  $8.24 \times 10^{13}$  m<sup>2</sup> of surface area. Calculate the total volume of the Atlantic Ocean. Write your answer in scientific notation. Verify your answer if you know that the Pacific Ocean has approximately two times the volume and approximately the same depth of the Atlantic Ocean, and a surface area of about  $1.66 \times 10^{14}$  m<sup>2</sup>.  
(3)

**24. Geography** The Danube River is Europe's second longest river. It flows through 9 countries and has a length of 1,770 miles. About how many feet long is the Danube?  
(SB)

 **\*25. Geometry** A box has a volume of  $\frac{x^3y^3x^{-2}}{y^{-3}x^2y}$ . The area resulting from length times width is  $\frac{x^{-2}y^3x^{-1}}{y^{-4}x^{-2}y^2}$ . Find an expression for the height of the box.  
(3)

**26. Analyze** Rita can choose to rent movies from one of two movie stores. The first store charges \$5 per movie, and she can rent her 8th movie for free. The second store charges \$7 per movie, and she can rent her 4th movie for free. Rita assumes that the second shop has a better deal because she must only rent 3 movies before receiving a free movie rental. Explain why she should not make this assumption.  
(2)

 **\*27. Graphing Calculator** Simplify  $\frac{2^{-3}}{8^{-2}}$ . Use a calculator to check your answer.  
(3)

**28. Error Analysis** The EPA lists the greenest hybrid car as getting 61 miles per gallon on the highway and 50 miles per gallon in the city. Assuming the fuel tank holds 15 gallons of gas, one owner decided to calculate the total miles that he could drive one tank of gas if 4 gallons were used in the city. Explain and correct his error.

$$61(4) + 50(15 - 4) = 244 + 75 - 200 = 119 \text{ miles}$$

**29. Analyze** Identify which property of real numbers is being demonstrated. Explain why this property might be helpful in solving this problem without a calculator.  
(1)

$$(9 \cdot 3) \cdot 3 = 9 \cdot (3 \cdot 3) = 9 \cdot 9 = 81$$

**\*30. Multi-Step** Shane spent \$2.24 on breakfast and  $x$  dollars on lunch.  
(2)

a. Write an expression for the amount of money Shane spent on breakfast and lunch.

b. If Shane spent \$5.97 on lunch, how much money did he spend in all?
